

# EVAC+CHAIR®

Evac+Chair is an universal emergency evacuation solution, widely accepted as an ingenious device for stairway descent. Smooth operation, enabling a single user to evacuate a colleague in an emergency is achieved by intelligent design, using continuous belts to provide controlled descent over stair nosings in proportion to passenger weight.

No heavy lifting is necessary, ensuring safe escape for all. The strategic placing of Evac+Chairs throughout the building, together with required escape drill training, helps organisations meet the duty of care in risk assessments in almost every building with more than a single storey.

Two models of Evac+Chair - both built to the same exacting quality standard - are designed to provide universal solutions, with standard payload and heavier payload capacity options.

## Evac+Chair Mk 3

## Evac+Chair 600H

With additional handles for two person operation

Load Capacity	150kg	Load Capacity	150kg
Width	52cm	Width	60cm
Folded Size	H = 104cm D = 20cm W = 52cm	Folded Size	H = 120cm D = 30cm W = 60cm
Weight	9.8kg (unladen)	Weight	11kg (unladen)

<b>Wheels</b>	4 - (rear 2 steer), plus 2 continuous tracks for stairway use	<b>Hammock-Style Seat &amp; Head Restraint</b>	Flame-retardant PVC coated woven reinforced Nylon
